

Ismail CELIK

Business Analyst

PROFILE

Through internships and education I learned about theoretical informations about Civil Engineering. My dream had always been to become a respectable Civil Engineer, but in my opinion in last four or five years my job is going under to under. In order to achieve this goal, I tried to learn some programmes like Tekla Structures which is you can draw three dimensions modelling, sap2000 which is you can calculate statics of structures. In my opinion I had achieved this goal but i don't want to improve myself on structural analysis anymore.

After my university education has finished, I was caught from Mimiç which is a electronic company to work as a production engineer. After working nine months, I learned to use MS Word, MS Excel, Postman (Link). I wanna say lastly that I have been trying to analysis new softwares for our productions for nine months. Because of that right now I want to be a business analyst in IT Systems.

For now my goal is using all informations which i learned to become a successful engineer to do my job and i want myself calling best by people whatever i deal with.

WORK EXPERIENCE

Intern at Sege Celik, IZMIR

September 2020 – June 2021
